

The below screen shot takes this long url : <http://www.amazon.com/Prime-Instant-Video/b?node=2676882011> and gives the short url as displayed below the textbox.

Again putting the same shortened URL in the textbox gives the long Amazon prime Url below the textbox.

Another example in similar manner for Lynda.com. Long URL <http://www.lynda.com/Facebook-tutorials/Working-Facebook-APIs/93082/107433-4.html> is entered , below the shortened URL localhost:3000/i86r1i6p is seen.

If the shortened url localhost:3000/i86r1i6p is put in the textbox , it shows the long Lynda.com URL <http://www.lynda.com/Facebook-tutorials/Working-Facebook-APIs/93082/107433-4.html>
